Explore Matches

User

Brief Description

The **Explore Matches** use case allows users to browse the profiles of other users on our platform. Users can filter the profiles based on select criteria.

Step-by-Step Description

1. The interface will display a list of profiles belonging to users currently online.
    a. The interface can display profiles that share traits with the user under a "Recommended" section.
    b. The user can also filter out specific profiles based on the criteria used in the questionnaire.
2. If the user opens a profile, they can request to initiate a conversation with the other user.
